

Clamp - On Jackets

Flow Fab Clamp-On Jackets are a form fitting fabrication for piping components, such as valves, pumps, fittings, meters and other items. Steam or hot oil may be used as a heating medium. They offer maximum efficiency for application of heat to those items.

Standard construction is carbon steel with FNPT connections. Standard design is for 150 psig @ 800 degrees F. Other materials and design constructions are available, as well as special fittings (socket-weld, flanges, extended for insulation) per customer specifications.

Advantages include fast delivery, ease of installation, excellent coverage, no cross contamination between product and heating medium, and easy removal for component maintenance or repair in the field.

Flow Fab Clamp-On Jackets are custom fabricated to fit your process components.
